

CARI POS Point of Sale System

CARI POS is an inventory control / point-of-sale package for the business that desires complete control over stock levels and inventory tracking. We designed for the Microsoft Windows environment, simple and usable by most retail and wholesale operations. Navigation is a breeze and creating reports takes just a few clicks. Buttons are consistent and easy to find. There is no need for repeat typing, reducing errors.

If you're tired of running your business by hand, computerization is one the quickest and most efficient ways to increase the profits of your business. Computerization allows you to quickly determine how much stock you have on hand. Not only does it keep track of inventory levels, but it alerts you when you're low on a particular product. Generate a reorder list with vendor information for easy reordering. Simply put, we are in the business of making your business run smoother.

Add another way to bring business into your stores. There is optional Customer Loyalty Points System feature integrates flawlessly and encourages repeat business.

If your business is already computerized and you're looking for a new inventory / point-of-sale control program, we have import capabilities for customers, stock codes and vendors.

Listed here are some of the features that our systems include.
